<p>The Portable Bullhorn provides squad leaders with the capability to project their voices above the noise and commotion created by crowds and mobs. The megaphone has a built-in siren for alarm purposes which allows the operator to use the device as an ordinary megaphone and siren alarm during emergency situations. The bullhorn is highly portable and is easy to carry when not in use. The bullhorn is also colored to match the current combat equipment. The acoustic range of the megaphone is 3/4 mile to one full mile while still retaining clear voice output. The power output of the megaphone is rated at 15 watts with a maximum rating of 20 watts. Dimensions of the megaphone are: 14.5" long with a 9" diameter bell and it weighs in at only 3.5 pounds without batteries. Battery requirements for the megaphone are eight dry cell "C" batteries.</p>	<p>TYPE CLASSIFIED: Not Applicable</p> <p>QTY: 8 per set</p> <p>NSN:</p> <p>Part # GSAATIA2M</p> <p>Requires: 8 x "C" cell batteries</p>

12 Gauge Shotgun with High Intensity Light Kit

Ref # : 24

ITEM DESCRIPTION

Twelve-Gauge (12 GA) Shotgun. There are several versions of pump action 12 gauge shotgun currently in the inventory. The Mossberg pump action shotguns, which are chambered to take up to 3-inch shells, are the most preferred and available ones for the NLCS at this time. The 3 inch chamber allows for the use of numerous GOTS and COTS lethal and NL munitions. The shotgun also provides a visually distinctive alternative to standard military weapons that may be desired based on mission considerations (force signature and acceptability). A Joint Service Shotgun is also being developed to potentially replace all current shotguns in inventory. It will provide the same capability as the Mossberg.

Portable Vehicle Arresting Barrier (PVAB)

Ref # : 35

ITEM DESCRIPTION

Portable Vehicle Immobilization System (PVIS). This is a device designed to assist with short term physical security of critical facilities and for use for in vehicle check points. It provides a small unit the ability to augment a vehicle checkpoint with the ability to stop vehicles from trying to flee the check point without killing the occupants. The device is designed to be set up by a small group of soldiers (2 to 3) in under a hour. When emplaced it resembles a standard speed bump. It has the capability of stopping a light truck (up to 7500 lbs) at speeds up to 45 mph. When armed the device operates within 1.5 seconds and deploys a high tensile net that catches the vehicle and slows it to a stop with internal braking mechanisms. It is best suited to mobile, short term vehicle check points in areas under US control where there is a threat of terrorist type activity where the threat uses the cover of noncombatants to infiltrate US areas of operation.

12 Gauge (Point) Round

Ref # : 40

ITEM DESCRIPTION

Twelve-Gauge (12 GA) NL Point Target Cartridge. The point target cartridge round gives the soldier a capability to stun individuals without penetrating the body by delivering a strong blow to the body. This munition fills a wide range of possible NL weapons applications. In crowd control it gives a soldier, convoy or crowd control formation a multi-shot NL capability that can be used to break contact, enforce a buffer zone (stand off distance) with a violent crowd, or to stun an individual threat for possible detention by snatch teams. It can also provide EPW facilities and US military detention facilities with similar capabilities. The round is designed to be fired at center mass of an adult subject at ranges between 10 meters and 20 meters.

ITEM DESCRIPTION

Twelve-Gauge (12 GA) Aerial Diversionary Device Round. The Aerial Diversionary Device Round gives the soldier a capability to distract individuals or crowds. In crowd control it gives a soldier, convoy or crowd control formation a multi-shot NL capability that can be used to provide a warning shot by delivering a flash bang projectile overhead of a violent or potentially violent crowd, or to distract the crowd (probably in combination with other distraction devices and troop maneuvers) to allow other troop formation to maneuver to a more advantageous position. The round is designed to be fired at ranges between 10 meters and 75 meters and placed about 5 meters above the head of the crowd. Shots fired at subjects or in enclosed areas may cause serious injury.

40MM Sponge Point Grenade

Ref # : 44

ITEM DESCRIPTION

40mm Sponge Round (Point). The 40mm Sponge Round gives the soldier a capability to stun individuals without penetrating the body by delivering a strong blow to the body. This munition fills a wide range of possible NL weapons applications. In crowd control it gives a soldier, convoy or crowd control formation a NL capability that can be used to break contact, enforce a buffer zone (stand off distance) with a violent crowd, or to stun an individual threat for possible detention by snatch teams. It can also provide EPW facilities and US military detention facilities with similar capabilities. The round is designed to be fired at center mass of the adult subject at ranges between 10 meters and 50 meters.

40MM (Area) Round

Ref # : 45

ITEM DESCRIPTION

40mm Crowd Dispersal Round (Area). The 40mm Crowd Dispersal Round gives the soldier a capability to stun/deter two to three people without penetrating the body by delivering a strong blow to the body. This munition fills a wide range of possible NL weapons applications. In crowd control it gives a soldier, convoy or crowd control formation a multi-shot NL capability that can be used to break contact, enforce a buffer zone (stand off distance) with a violent crowd, or to clear an area of a violent crowd. It can also provide EPW facilities and US military detention facilities with similar capabilities. The round is designed to be fired at center mass of the adult subject at ranges between 10 meters and 30 meters.

5.56 (Point) Round

Ref # : 46

ITEM DESCRIPTION

5.56mm Rifle Launched Munitions(Point). This munition gives the soldier a capability to stun/deter individuals without penetrating the body by delivering a strong blow to the body. The Rifle Launched Munition requires the firer to fire a blank round to launch the multiple ball projectiles allowing the firer to rapidly switch to lethal munitions should the situation require. The munition has a strong recoil and soldiers should wear fragmentation protective vests to help reduce discomfort at the shoulder from firing it. This munition fills a wide range of possible NL weapons applications. The round is designed to be fired at center mass of the adult subject at ranges between 30 meters and 80 meters. Shots fired at subjects closer than 20 meters or shot placement at the head or groin may cause serious injury or death.

5.56 Non-Lethal Round

5.56 (Area) Round

Ref # : 47

ITEM DESCRIPTION

5.56mm Rifle Launched Munitions (Area). This munition gives the soldier a capability to stun/deter large numbers of people without penetrating the body by delivering a strong blow to the body. The Rifle Launched Munition requires the firer to fire a blank round to launch the multiple ball projectiles allowing the firer to rapidly switch to lethal munitions should the situation require. The munition has a strong recoil and soldiers should wear fragmentation protective vests to help reduce discomfort at the shoulder from firing it. This munition fills a wide range of possible NL weapons applications. In crowd control it gives a soldier armed with a standard M16 engaged in patrolling, convoy or crowd control formations a single-shot NL capability that can be used to break contact, enforce a buffer zone (stand off distance) with a violent crowd, or to clear an area of a violent crowd. It can also provide EPW facilities and US military detention facilities with similar capabilities. The round is designed to be fired at center mass of the adult subject at ranges between 30 meters and 80 meters. Shots fired at subjects closer than 20 meters or shot placement at the head or groin may cause serious injury or death.

66MM (LV0SS) Canister (Sting Ball)

Ref # : 50

ITEM DESCRIPTION

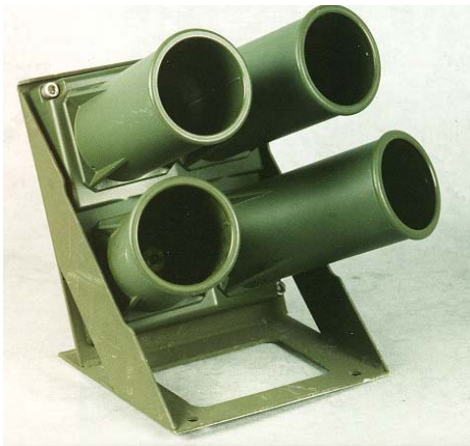

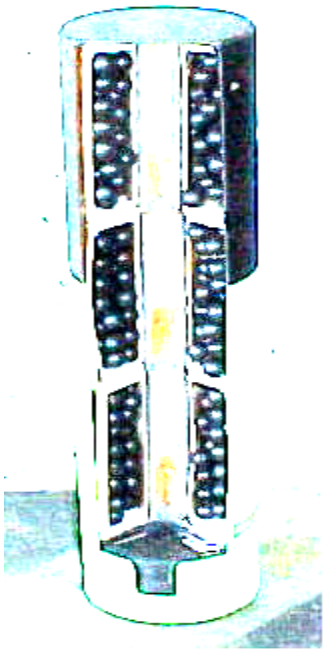

LV0SS 66mm Sting Ball. This is an area target munition that can be fired from the standard LVOS launcher standard on selected Armament Carrier HMMWVs and can be fired from any 66mm smoke launching system found on most armored vehicles. These rounds are designed to fire from 80 to 100 meters and burst delivering a payload of rubber non-penetrating projectiles. These munitions lack the ability to be precision delivered and are meant to affect a large number of people at longer standoff ranges. This gives convoys and crowd control formations a longer range support weapon to affect crowds beyond the range of shoulder fired NL weapons. It is best used to provide supporting NL fires to crowd control formations.

66MM (LV0SS) Canister (Diversiónary Flash Bang)

Ref # : 51

ITEM DESCRIPTION

LV0SS 66mm Flash Bang/CS/Multiple Ball. This is an area target munition that can be fired from the standard LVOS launcher standard on selected Armament Carrier HMMWVs and can be fired from any 66mm smoke launching system found on most armored vehicles. These rounds are designed to fire from 80 to 100 meters and burst delivering a flash bang diversionary/warning effect, a payload of rubber non-penetrating projectiles (affecting a 10 to 20 meter circular area), or CS smoke below the point of burst. These munitions lack the ability to be precision delivered and are meant to affect a large number of people at longer standoff ranges. This gives convoys and crowd control formations a longer range support weapon to affect crowds beyond the range of shoulder fired NL weapons. It is best used to provide supporting NL fires to crowd control formations.

Rigid Foam Dispenser

Ref # : 56

ITEM DESCRIPTION

Rigid Foam Dispenser / Munition. Non-lethal Rigid Foam (NLRF) will enhance force protection by providing U.S. Forces the capability to deny areas to personnel and to disable weapons systems, vehicles and facilities. NLRF is intended to be a hand delivered, low hazard, non-shrapnel producing, adhesive, anti-material substance. The primary purpose is to be able to render captured materials inoperable without resorting to explosive means that not be appropriate based on the operations or may be a health and environmental hazard in a MOOTW situation.

Slippery Foam Dispenser

Ref # : 57

ITEM DESCRIPTION

Non-lethal Slippery Foam (NLSF). This item is used to reinforce counter-personnel and counter-vehicle barriers, increasing U.S. Forces area denial and force protection capabilities. NLSF limits potential adversary mobility by spreading a mobility inhibiting substance over select dismounted and mounted avenues of approach. NLSF is dispensed by several means to include, man-portable hand-delivered, vehicle-portable mechanically dispensed, and helicopter mechanically dispensed methods.
